Clarification Question Responses

TWG-Y – Standardised SCADA Process (SSP)

17th April 2024

#	Type	Question	Response
1	Project specific	Regarding Description of Tender - 2.4: <i>"The expected benefits of this work are in developing a common understanding of how to process SCADA data for use in model validation, boosting confidence in the models themselves."</i> The scope of work focusses very much on the data. What model types should be considered as reference for establishing the best-practice?	<p>The focus is (as you say) on the measured data which would then be used as a reference to compare model predictions. The results should not depend on model selection <i>per se</i>.</p> <p>If it would be useful to include model runs as part of your technical approach, please use any of the commonly-used models in freely-available tools such as PyWake.</p>
2	Project specific	Does the 10-month expected project duration relate only to the non-optional phase of the project?	<p>Ideally we would like to complete the full scope within 10 months, including optional tasks. However, if that isn't feasible, the minimum requirement is to complete the non-optional tasks within 10 months.</p>
