

FLOATING WIND JOINT INDUSTRY PROGRAMME S3P1

# Clarification Question Responses

Prevention of Marine Growth PoMG

24<sup>th</sup> March 2023

#	Type	Question	Response
1	Project specific	<p><b>WP2: Lifetime effects of marine growth</b></p> <p>In WP2, it is stated that the lifetime effects of marine growth should be assessed for “a 15MW floating turbine (TLP, Spar, Barge, Semi-Sub)”. Please confirm if each of these four floater concepts should be reviewed and compared when performing loads analysis, or if a single floater concept should be selected to provide representative results?</p>	<p>We would like to assess the variation for all four major types of floating substructure.</p> <p>Focus on one or two types of floating substructure may be necessary depending on the level of simulations required/proposed. Representative findings in relation to other substructures could be a valid approach. The key is for the contractor to justify the reason for their approach/assumptions, which need to be realistic in relation to budget.</p>
